Your 10-minute app test

Use fictional information only. Do not enter your own income, debts, savings, name or contact details. Participation is voluntary; you may skip a question or stop.

Your facilitator will give you an anonymous ID and tell you which case to use first. You can type in the blank PDF fields or write on a printed copy.

Anonymous ID (provided by the facilitator):

Part 1: text-only case / Part 2: app case (provided by the facilitator):

1. Text-only task

Read your first assigned case and answer its six questions independently. Do not open BNPLGuard yet. A basic calculator is allowed. If unsure, write your best answer or "not sure". Tell the facilitator when you have finished.

2. App task

When the facilitator says Part 2 starts, open the public app below. Use the **Stress** area for your other assigned case and answer the same six questions on that case page. Enter the case values rather than loading the default financial example. Use AUD, a 20% income reduction and zero hypothetical reduction of existing BNPL.

https://bnplguard-yixuan502.streamlit.app/

A basic calculator is also allowed in this part. Tell the facilitator before changing an answer you have already submitted. You may ask for help; they will first preserve what you have done independently.

3. Final reflection

After the case tasks, complete the Screen activity and feedback on page 4. All cases and questionnaire examples are fictional.

Case A

Use this page only in the part assigned by your facilitator.

All amounts are AUD. Income, living expenses and repayments are monthly. Necessary living expenses exclude every debt and BNPL repayment listed separately. Emergency savings is an available balance today. Other assumptions remain unchanged in each scenario.

Fictional information	AUD
Monthly after-tax income	4,000
Necessary living expenses	2,200
Non-BNPL debt repayments	600
Existing BNPL repayments	300
Proposed new BNPL repayments	200
Available emergency savings	800

Q1. Before the proposed new BNPL repayment, what is the current monthly cash buffer? Give an AUD amount.

Q2. What is the monthly cash buffer after adding only the proposed new BNPL repayment?

Q3. Compared with the current situation, by how much does the buffer change after only that new repayment? Give an amount and direction.

Q4. What is the final monthly cash buffer if the stated income is 20% lower and the proposed new BNPL repayment also applies?

Q5. Compared with the current situation, by how much does the buffer change in that combined scenario? Give an amount and direction.

Q6. In that combined scenario, is there a surplus, a shortfall, or exactly zero?

Case B

Use this page only in the part assigned by your facilitator.

All amounts are AUD. Income, living expenses and repayments are monthly. Necessary living expenses exclude every debt and BNPL repayment listed separately. Emergency savings is an available balance today. Other assumptions remain unchanged in each scenario.

Fictional information	AUD
Monthly after-tax income	5,000
Necessary living expenses	2,800
Non-BNPL debt repayments	700
Existing BNPL repayments	400
Proposed new BNPL repayments	300
Available emergency savings	1,200

Q1. Before the proposed new BNPL repayment, what is the current monthly cash buffer? Give an AUD amount.

Q2. What is the monthly cash buffer after adding only the proposed new BNPL repayment?

Q3. Compared with the current situation, by how much does the buffer change after only that new repayment? Give an amount and direction.

Q4. What is the final monthly cash buffer if the stated income is 20% lower and the proposed new BNPL repayment also applies?

Q5. Compared with the current situation, by how much does the buffer change in that combined scenario? Give an amount and direction.

Q6. In that combined scenario, is there a surplus, a shortfall, or exactly zero?

Screen and your feedback

When the facilitator asks, open **Screen**, select **Load fictional example**, then **Run screening**. Use that questionnaire example, rather than the AUD case values.

S1. In your own words, what does the displayed Screen percentage estimate? What conclusion would you avoid drawing from it?

Clarity. How clear was the app when comparing the monthly scenarios? Choose one number: 1 = very unclear, 2 = unclear, 3 = neither clear nor unclear, 4 = clear, 5 = very clear.

One comment. In your own words, describe one thing that was clear or easy to misunderstand. Do not include personal financial information.

Thank you. Please return this sheet to the facilitator. You may explain anything you want to add after your independent responses have been recorded.
